

spawtz.com
your online sports office

FEATURES FOR LEAGUE ORGANISERS:

- **Accept team registrations and payments online**
 - Allowing teams to register online means that you no longer need to transfer team and contact information from a paper form they've filled in to your database. Their contact information will be available from the moment they sign up and will be kept up to date by them as the season progresses.
 - Payments can be made online using a variety of third party payment gateways. Spawtz.com have used WorldPay, Barclay Merchant Services EPDQ and Netbank's Iveri Payment Processing systems in the past, and can advise on which online payment system may be best for you, and if you have a different system that you would like to use we would be happy to integrate that as well.
- **Accept registrations from individuals**
 - When players who are seeking a team register on your site, Spawtz will send you an email containing their details so you can find an appropriate team for them, or create a new team from individual users thereby increasing your revenue.
 - Individual players can also indicate that they would like to be registered as a "Ringer". If a player is registered as a ringer, they will go into the database of players whom team captains may contact if they come up short of players for a fixture. This is a very popular feature with the team captains.
- **Automatically schedule fixtures using customisable fixture generation templates**
 - Spawtz.com initially contains a set of "default" fixture generation templates for your leagues. You specify the times and venues on which these fixtures should be played and then Spawtz will generate the fixtures accordingly. If you have specified team preferences (for example, "Team A would like to play at 18:30, but cannot play at 19:15 on Tuesdays") Spawtz will attempt to schedule fixtures at times that are good for the teams and will warn you if no such times were available.
 - If you have a different set of requirements for who should play whom in each round or if your times and venues NEVER change then you can create your own template containing those requirements, or provide us with the details and we'll do it for you.
- **Create bill items for teams and individuals for any items**

- **Use the scheduling grid to quickly and easily create, move and view your fixtures**

- View, create and edit fixtures quickly and easily using the scheduling grid. This grid will show you which playing areas are being under-utilized, which teams are playing where and when, and will also show you when there are clashes (for example if you schedule a team to play twice at the same time, or if an individual is associated to more than one team and is scheduled to play twice at the same time, or when a team is scheduled to play at a time that they have indicated is bad for them).

- **Configure all system generated text, emails and SMSes to show exactly the text that you require**

- Whether it be the email sent to team captains when they have completed a team registration or the automated fixture reminder emails that are sent out each week, Spawtz allows you to completely customise all aspects of system text to display exactly the text or logos that you require. So you can easily add text to the fixture reminder emails to inform your players of your upcoming social events, or you can include your sponsor's logo above standings tables. There is no restriction on what text you can display or the format of that text.

FEATURES FOR TEAM ORGANISERS:

- **Register and pay your league and fixture fees online**
 - Via your online statement you can register your team for upcoming leagues and ladders and pay your fees for those leagues. No need to stand in a queue at the venue to pay your fixture fees on the night of a match.
- **Let Spawtz deal with sending out the "Hey, can you play next week?" emails**
 - Enter all your players' details into your online control panel and Spawtz will automatically send out two fixture reminder emails a week: one on the day after a fixture reminding players of next week's match and one on the day before fixtures. These emails will contain "Availability links": links within the emails that users can click on to indicate their availability for the specified fixture. When they click on an availability link, Spawtz will inform you via email of their indicated availability. This feature of Spawtz effectively eliminates much of the thankless grunt work that you have to do each week to organise your team.
- **Find "keen individuals" to play for your team on days when you come up short of players for a fixture**
 - Individual players who sign up to your league can indicate that they would like to be registered as a "ringer". You can contact these individuals through the site to enquire after their availability to fill in for unavailable players if you find yourself short of players for a fixture. This feature saves you much of the time you spend each week ringing around friends and friends of friends to try and find enough people to field a team.

- **Let your players keep their own details up to date**
 - Each player who is registered on the system can log in and update their contact details. Their motivation for doing this is to ensure that they continue to receive the fixture reminder emails, and it means that all your players' contact information is available to you from anywhere with an internet connection.
